What is API = Application Programming Interface
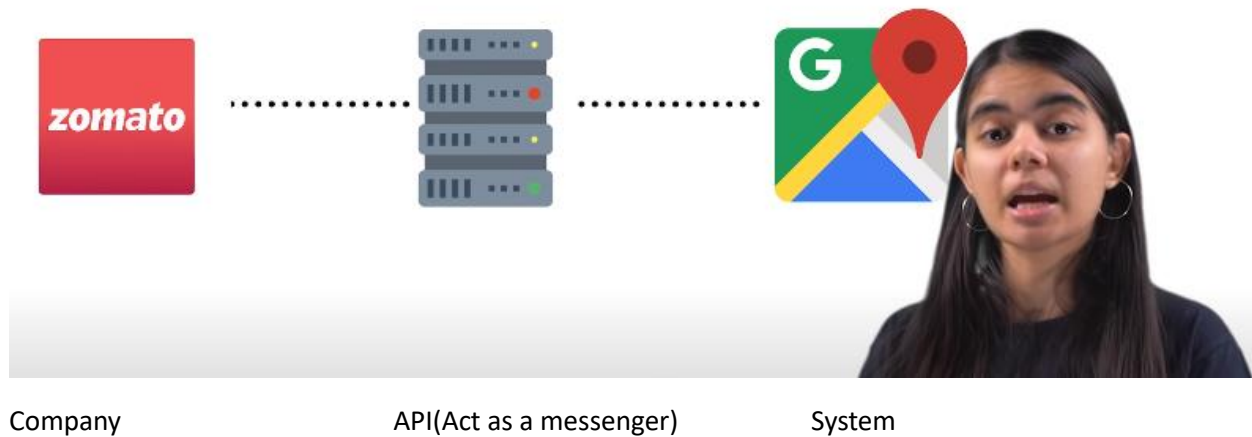

aapna kam dusro ke sir pe dalna

As we see Zomato, there is an tracker map for delivery boy, so Zomato cannot use google map directly, there is an google map api

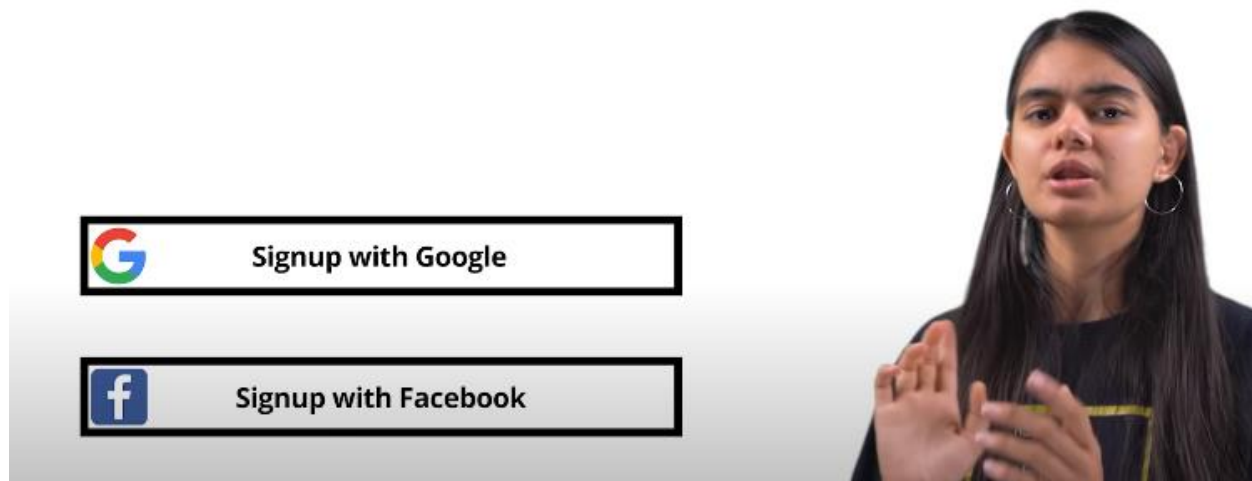

For security purpose API is imp

Zomato Request ------> API , API Request --------> Google Map

Company   API(Act as a messenger)   System

For like this, we have to sign up option in every application(They are actually work as API BY Google api)

We all have account in Google and FaceBook or Github (That's why we directly signup). Our data save in this database

But this data or api can be use by any one

That's Why we have API Keys (Some are free, but for large data they are paid), They give security code

By this, API Keys our Data and Credentials are safe
